

# GISSELLE RODRIGUEZ

Full Stack Developer & AI Engineer

Miami, FL | GitHub: [github.com/Gisselle546](https://github.com/Gisselle546) | [gissellerodriguez431@gmail.com](mailto:gissellerodriguez431@gmail.com) | site: <https://gisselleworks.netlify.app/> | (786) 546-0432

## PROFESSIONAL SUMMARY

---

Full Stack + AI Engineer with 7+ years building production systems. Delivered measurable impact including 25% engagement lifts from ML features, 40% faster page loads, and 30% quicker deployments. Deep expertise in React/Next.js, Node.js, Python, multi-agent systems (LangGraph), feature platforms, and lakehouse architectures. Currently focused on production agentic systems, data platforms, and platform engineering.

## TECHNICAL SKILLS

---

**Frontend:** React, Next.js, Angular

**Backend:** Node.js, NestJS, Django, Python, REST & GraphQL APIs, microservices, .NET

**AI / Agentic Systems:** LangGraph / LangChain, multi-agent architectures (supervisor/worker, planner), RAG, MCP, LLM orchestration, guardrails, evaluation harnesses

**Data Engineering & Feature Platforms:** PostgreSQL, dbt, incremental models, lakehouse (medallion architecture), feature stores, point-in-time correctness, ETL/ELT, Airflow, Redis, MongoDB, DynamoDB

**Cloud, Platform & Observability:** AWS, Docker, Kubernetes, Crossplane, ArgoCD (GitOps), Backstage (IDP), CI/CD, DevSecOps, OpenTelemetry

## PROFESSIONAL EXPERIENCE

---

### Independent Software & AI Consultant

*Full-Stack Engineering • AI/Agentic Systems • Data Engineering • Cloud Platforms | 2017–Present*

Partner with startups, agencies, and product teams to design, modernize, and ship production software across full-stack applications, AI-enabled systems, cloud infrastructure, and data platforms. Own engagements from architecture and implementation through deployment, observability, performance optimization, and production hardening.

- Designed and shipped production applications using React, Next.js, TypeScript, Node.js/NestJS, Python/FastAPI/Django, PostgreSQL, AWS, Docker, and Kubernetes, supporting both greenfield products and modernization initiatives.
- Delivered AI-enabled product capabilities and agentic workflows using LangChain/LangGraph, RAG, LLM orchestration, tool integration, evaluation, and guardrails, contributing to a 25% increase in user engagement.
- Re-architected frontend and API data flows to improve application responsiveness and reduce page-load times by approximately 40%.
- Streamlined CI/CD, containerization, deployment, and observability workflows, improving release velocity by approximately 30% while strengthening production reliability.
- Designed multi-tenant SaaS architectures with tenant isolation, RBAC, audit logging, asynchronous background processing, and secure service boundaries.
- Built modern data engineering pipelines and lakehouse-style architectures using Python, SQL, dbt, AWS, Snowflake, PostgreSQL, incremental processing, CDC patterns, and Bronze/Silver/Gold data modeling.
- Developed data quality and operational controls covering freshness, completeness, schema validation, reproducibility, lineage, and point-in-time correctness.
- Improved product retention and bounce-rate performance by approximately 20–35% through performance optimization, product experimentation, and user-flow improvements.

## SELECTED CLIENT ENGAGEMENTS

---

### Digital Agency — Collaborative SaaS Platform

*Full-Stack / Platform Engineering*

- Architected a multi-tenant collaborative workspace with hierarchical Workspace → Project → Document/Task authorization boundaries and strict tenant isolation at both row and storage levels.
- Implemented real-time collaboration, presence, concurrent editing controls with deliberate consistency model, audit trails, notifications, exports, and search-indexing workflows.
- Maintained responsive application behavior under concurrent workloads of 8–10 active users within shared workspaces.

### Multi-Channel Retail — Analytics & Data Platform

*Data Engineering*

- Designed a Bronze/Silver/Gold lakehouse architecture supporting orders, inventory, returns, customer behavior, and marketing attribution with incremental ingestion and CDC patterns.
- Implemented dbt transformations, data contracts, quality testing (freshness, completeness, schema validation), and late-arriving-data handling while preserving point-in-time correctness and reprocessability.
- Developed trustworthy analytics for inventory position, Customer Lifetime Value, promotion incrementality, and operational SLA monitoring with cost-per-TB visibility.

## **Marketplace / FinTech — ML Feature Platform**

### *Data Engineering + AI/ML Infrastructure*

- Designed a dual-path batch + streaming feature architecture with offline training datasets and low-latency online feature serving for risk and personalization models.
- Implemented point-in-time-correct feature retrieval to prevent training-serving skew and historical data leakage; demonstrated correctness across different timestamps for the same entity.
- Added monitoring for freshness, null rates, distribution shift, and drift so critical features alert before downstream model impact; new features can be registered without breaking existing consumers.

## **EDUCATION**

---

### **Bachelor of Science in Electrical Engineering**

Florida International University | 2015

### **Business Applications Certificate — Computer Programming**

Miami Dade College | 2017

### **Associate of Arts in Electrical Engineering**

Miami Dade College | 2011
